

This form requires you to record the depth below sea level (bsl) of the **deepest kelp plant** (*cuvie/Laminaria hyperborea*) you encounter; the **deepest 'bushy' (foliose) brown seaweed**; and the **deepest foliose red seaweed**. Ideally, take a photo* of the seaweed in question with your diving computer beside it. Make sure you also record the GPS position (from the dive boat) and the mid-time of your dive, so that you can subtract the predicted tide height at that time to give your depth below chart datum (bcd).

* Photo file name must include: subject (species name if known)_site name_your name_date

Name of Recorder: Date:

E-mail:

Site name (if known)	GPS position	Depth (bsl)		Time at mid-dive	Depth (bcd)	
Description of individual seaweed (scientific name if sure of ID)		Have you attached a photograph/s?				
[Text field/180 characters max.]		Yes	[Tick]	Number?	No	[Tick]

Site name (if known)	GPS position	Depth (bsl)		Time at mid-dive	Depth (bcd)	
Description of individual seaweed (scientific name if sure of ID)		Have you attached a photograph/s?				
[Text field/180 characters max.]		Yes	[Tick]	Number?	No	[Tick]

Site name (if known)	GPS position	Depth (bsl)		Time at mid-dive	Depth (bcd)	
Description of individual seaweed (scientific name if sure of ID)		Have you attached a photograph/s?
